#### 8.2 Exposure controls

##### Appropriate engineering controls

Ensure good ventilation. This can be achieved by local exhaust ventilation or general exhaust ventilation.

If this is not sufficient to keep the concentration below the occupational exposure limit values (OEL), suitable respiratory protection must be worn.

Only applies if exposure limit values are listed here.

In order to check the effectiveness of protective measures, e.g. ventilation or the need for respiratory protection, metrological monitoring of the workplace may be necessary. Since this requires special expertise, only accredited measuring bodies should be commissioned for this purpose. With regard to suitable methods for determining inhalation exposure, the European standards EN 482, 689 and 14042 are to be applied. In addition, TRGS 402 in Germany must be observed.

##### Individual protection measures, such as personal protective equipment

##### General protective and hygienic measures:

Handle in accordance with good industrial hygiene and safety practice.

Wash hands before breaks and at the end of work.

Keep away from foodstuffs, beverages and feed.

Remove contaminated clothing and protective equipment before entering areas where food is served.
