Storage:

Requirements to be met by storerooms and receptacles: No special requirements.

Information about storage in one common storage facility: Not required.

Further information about storage conditions: Do not heat up to temperatures close to the flash point.

Storage class: 10

7.3 Specific end use(s) No further relevant information available.

SECTION 8: Exposure controls/personal protection

8.1 Control parameters

Ingredients with limit values that require monitoring at the workplace:

Base oil paraffinic - alveolar fraction

MAK; 5 mg/m³

Germany. DFG-MAK list (recommended occupational exposure limits). Commission for the Investigation of Health Hazards of Chemical Compounds in the Work Area (DFG) (07 2022)

Additional information:

The data sheets of the upstream suppliers and lists valid at the time of production serve as a basis.

8.2 Exposure controls

Appropriate engineering controls

Ensure sufficient ventilation. Ventilation levels must be adapted to conditions. Where appropriate, use process chambers, local exhaust systems or other engineering controls to maintain airborne concentrations below recommended exposure limits. If no exposure limits have been set, maintain airborne concentrations at an acceptable level.

Individual protection measures, such as personal protective equipment

General protective and hygienic measures:

Wash hands before breaks and at the end of work. Use prescribed personal protective equipment. Personal protective equipment must be chosen in accordance with the applicable CEN standards and in consultation with the supplier of personal protective equipment. The usual precautions when handling petroleum products or chemicals must be observed in all cases.

Do not carry product impregnated cleaning cloths in trouser pockets.

Always observe good personal hygiene measures, such as washing after handling the material and before eating, drinking, and/or smoking. Routinely wash work clothing to remove contaminants. Discard contaminated footwear that cannot be cleaned.

Wash hands before breaks and at the end of work.

Respiratory protection:

Ensure good ventilation/exhaustion at the workplace. Avoid breathing vapour/ aerosol.

Hand protection

Avoid prolonged or repeated skin contact. Suitable protective gloves are recommended by the glove supplier. Preventive skin protection with skin protection ointment. Protective gloves where safety permits. The exact breakthrough time should be obtained from the protective glove manufacturer and adhered to, as it depends not only on the glove material but also on factors specific to the workplace.

The glove material has to be impermeable and resistant to the product/ the substance/ the preparation.

Due to missing tests no recommendation to the glove material can be given for the product/ the preparation/ the chemical mixture.

Selection of the glove material on consideration of the penetration times, rates of diffusion and the degradation

Material of gloves

NBR: Acrylonitrile butadiene rubber

Recommended thickness of the material: ≥ 0.38 mm

The selection of the suitable gloves does not only depend on the material, but also on further marks of quality and varies from manufacturer to manufacturer. As the product is a preparation of several substances, the resistance of the glove material can not be calculated in advance and has therefore to be checked prior to the application.

Penetration time of glove material

>480min

The exact break through time has to be found out by the manufacturer of the protective gloves and has to be observed.
