#### Additional information:

The data sheets of the upstream suppliers and lists valid at the time of production serve as a basis.

### 8.2 Exposure controls

#### Appropriate engineering controls

Ensure sufficient ventilation. Ventilation levels must be adapted to conditions. Where appropriate, use process chambers, local exhaust systems or other engineering controls to maintain airborne concentrations below recommended exposure limits. If no exposure limits have been set, maintain airborne concentrations at an acceptable level.

#### Individual protection measures, such as personal protective equipment

##### General protective and hygienic measures:

Wash hands before breaks and at the end of work. Use prescribed personal protective equipment. Personal protective equipment must be chosen in accordance with the applicable CEN standards and in consultation with the supplier of personal protective equipment. The usual precautions when handling petroleum products or chemicals must be observed in all cases.

Always observe good personal hygiene measures, such as washing after handling the material and before eating, drinking, and/or smoking. Routinely wash work clothing to remove contaminants. Discard contaminated footwear that cannot be cleaned.

Do not carry product impregnated cleaning cloths in trouser pockets.

##### Respiratory protection:

Ensure good ventilation/exhaustion at the workplace. Avoid breathing vapour/ aerosol.

##### Hand protection

Protective gloves

The glove material has to be impermeable and resistant to the product/ the substance/ the preparation.

Due to missing tests no recommendation to the glove material can be given for the product/ the preparation/ the chemical mixture.

Selection of the glove material on consideration of the penetration times, rates of diffusion and the degradation

##### Material of gloves

Material: Nitrile-butadiene rubber (NBR).

Min. Breakthrough time:  $\geq 480$  min

Recommended thickness of the material:  $\geq 0,38$  mm

Avoid prolonged or repeated skin contact. Suitable protective gloves are recommended by the glove supplier.

Preventive skin protection with skin protection ointment. Protective gloves where safety permits. The exact breakthrough time should be obtained from the protective glove manufacturer and adhered to, as it depends not only on the glove material, but also depends on factors specific to the workplace.
