### 8.2 Exposure controls

**Personal protective equipment:**

**General protective and hygienic measures:**

Provide adequate ventilation.  
Contaminated work clothing should not be allowed out of the workplace.  
Do not eat or drink while working.  
Immediately remove all soiled and contaminated clothing  
Wash hands before breaks and at the end of work.

**Respiratory protection:**

With correct and proper use, and under normal conditions, breathing protection is not required. Respiratory protection necessary at:  
-aerosol or mist formation  
-exceeding exposure limit values.  
Recommended filter type: A2, A2P2, ABEK  
In case of brief exposure or low pollution use respiratory filter device. In case of intensive or longer exposure use self-contained respiratory protective device.

Protection of hands:
Use safety gloves of following materials: NBR (nitrile) / neopren / viton (permeationslevel 5 - 6), Cat. II according to norm EN 347/EN 388.

Protective gloves

The glove material has to be impermeable and resistant to the product/ the substance/ the preparation. Due to missing tests no recommendation to the glove material can be given for the product/ the preparation/ the chemical mixture. Selection of the glove material on consideration of the penetration times, rates of diffusion and the degradation

Material of gloves
Nitrile
Neoprene
Viton

The selection of the suitable gloves does not only depend on the material, but also on further marks of quality and varies from manufacturer to manufacturer. As the product is a preparation of several substances, the resistance of the glove material can not be calculated in advance and has therefore to be checked prior to the application.

Penetration time of glove material
The exact break through time has to be found out by the manufacturer of the protective gloves and has to be observed.

Eye protection:

Tightly sealed goggles

EN 166

Body protection: Heavy flammable, oil-repellent protective clothing
